 - [3.3.](#)
- [4.](#)
 - [4.1.](#)
 - [4.2.](#)
 - [4.3.](#)

In [2]: `import numpy as np`

1. Tab completion

([go to top](#))

- While entering expressions in the shell, pressing the Tab key will search the namespace for any variables (objects, functions, etc.) matching the characters you have typed so far

In [1]: `apple_1 = 27`
`apple_2 = 42`

- Type 'ap' then press Tab

In []: `#ap`

- Naturally, you can also complete methods and attributes on any object after typing a period:

```
In [3]: b = [1, 2, 3]
```

- Type "b." then press Tab
- Type "np." then press Tab
- Type "_" then press Tab
-

```
In [ ]: #b
```

2. Introspection

[\(go to top\)](#)

- Using a question mark (?) before or after a variable will display some general information about the object:

```
In [4]: # b?  
# apple_1?  
# apple_2?  
# print?
```

3. Title
